

Alfresco offers a flexible, scalable content management platform that combines open source advantages with a powerful, enterprise-class engine.

Alfresco is a **leading open source alternative** for enterprise content management. It couples the innovation of open source with the stability of a true enterprise-class platform. The open source model allows Alfresco to use best-of-breed open source technologies and contributions from the open source community to get higher-quality software produced more **quickly at much lower cost**.

The company's goal is to not only provide an open source offering but to surpass commercial offerings such as Documentum or Microsoft SharePoint® in terms of features, functionality and benefits to the user community.

Alfresco offers true Open source Enterprise Content Management (ECM) - Document Management, Collaboration, Records Management, Knowledge Management, Web Content Management, and Imaging.

Alfresco Product Features
