

Information Security

5

5 cyber security domains are necessary to completely secure your organisation's information.

Ps

Phones, PCs, printers are all endpoint and network attached devices that expose your information to risk. Tablets, USB memory, laptops also need to be monitored and secured.

24

24 hours per day. It is important that all layers and aspects of the information technology stack are monitored all of the time to avoid your information being compromised.

PPT

People, processes and technology need to be tightly integrated to ensure an information environment that meets acceptable risk tolerance levels.

Information is one of your most important assets. The protection of all information assets is necessary to establish and maintain trust between your organisation and your customers, to maintain compliance with the law and to protect the reputation of the organisation.

Timely and reliable information is necessary for decision support and to process transactions. An organisation's financial wellbeing can be adversely affected if information becomes known to unauthorised parties, is altered, or is unavailable when it is needed.

Information security from Datacentrix is a process by which a specialist team of engineers works with responsible personnel in your organisation to protect and secure your organisation's data, systems, media and IT facilities. In addition, the process is essential in protecting the privacy of customer information.

Organisations and their service providers should maintain effective security programmes aligned with their operational complexity. Security is not a once-off control; it is an ongoing process that includes the ability of the organisation to continually assess its security position and react appropriately in the face of rapidly changing threats, technologies and business conditions.

Datacentrix works with you to establish and maintain truly effective information security by continuously integrating people, processes and technology to mitigate risk in accordance with risk assessments and acceptable risk tolerance levels. We will ensure that your information is protected by instituting a security process that identifies risks, builds strategies to manage the risks, implements the strategy, tests the implementation and monitors your information environment to control the risks.

Forces impacting security posture

As the world becomes more connected, the traditional security models falls away. Companies need to acknowledge the change and implement technologies that operate in orchestration as opposed to isolation.

The ability to adapt to secure different user connectivity requirements whilst ensuring that there is not a loss of business continuity is always a challenge. Datacentrix provides the skill set to work alongside our customers to understand their specific challenges and customises solutions to fit within their existing and future Information Technology framework.

Security is not a once-off control; it is an ongoing process that includes the ability of the organisation to continually assess its security position and react appropriately in the face of rapidly changing threats, technologies and business conditions.

Objectives

Datacentrix uses five cyber security domains to architect holistic solutions that achieve the security requirements of confidentiality, integrity, availability, accountability and assurance (governance). The five domains provide us with a baseline by which we ensure that a client's environment has met the basic requirements around their security posture.

Trusted process: Datacentrix Information Security Solutions

Technology Partners

About Datacentrix

Datacentrix is a complete ICT systems integrator, providing solutions and services across the full information value chain to its customers. The company uses leading technologies to drive customer business strategies, unlocking efficiencies and empowering meaningful business insight.

Our most valuable assets are captured in the minds and spirit of our people. Every person at Datacentrix is a critical part of our service delivery model and our strategy for generating sustainable value for our customers and stakeholders.

We value partnerships and go the distance to establish trusting, lasting customer and stakeholder relations. Our longstanding affiliations and accreditations with our technology partners enable direct access to technology using the shortest channels.

It's our passion for excellence that drives our innovative and flexible solution design. Datacentrix' value-driven strategy and proven execution capability reinforce its position as one of the top ICT players in the local market.
