Unlock operational foresight with Datacentrix's digital twin solutions. Utilise semantic ontologies to simulate, predict and optimise your industrial environment, reducing mean time to repair (MTTR) and driving sustainable growth in information technology (IT) and operational technology (OT) converged spaces.

1. Beyond Monitoring: A Living Digital Blueprint of Your Operation

In the pursuit of smarter, more agile ways of working, the digital twin has emerged as a disruptive force in industrial innovation. A digital twin is more than a static model; it is a dynamic digital representation of a physical thing, person, or place – connected via the Internet of Things (IoT) to provide a real-time reflection of your entire operational landscape.

Datacentrix delivers a powerful, ontology-driven approach to digital twin technology. By mapping relationships between assets, people and processes, we enable organisations to move beyond simple data collection into a realm of simulation, prediction and continuous optimisation.

2. The Power of Semantic Ontology

What sets our approach apart is the use of semantic ontologies. While traditional models show data points, an ontological design shows how everything is connected. This allows you to:

- **Drill down into granular detail:** Transition instantly from a global map view into blueprints, technical drawings and live sensor feeds with a single click.
- **Contextualise data:** Understand not just *that* an asset is failing, but *why* it matters to the broader process, allowing for informed, data-driven decision making.
- **Visualise situational awareness:** Leverage real-time dashboards that change status based on predefined parameters, ensuring the right people see the right information at the exact moment it matters.

3. The Business Case: Simulation, Prediction and Growth

Strategic digital transformation is no longer a luxury; it is an imperative for maintaining a competitive edge. Implementing a digital twin strategy delivers tangible returns:

- **Maximising operational efficiency:** Gartner predicts that major industrial companies utilising digital twins can see an efficiency improvement of up to 10%. By simulating "what-if" scenarios, we help you identify floor layout inefficiencies and optimise machinery cycles without risking downtime.
- **Reducing MTTR:** Real-time monitoring and automated alerts allow for proactive maintenance. By identifying faults before they cascade, our clients have successfully reduced MTTR by 50%, moving from reactive repairs to predictive uptime.

- **Sustainable, data-driven growth:** Digital twins provide the clarity needed to manage resources more effectively. From electrical metering to energy management, we enable audit-ready optimisation that supports both profitability and sustainability goals.

4. Realising Smart Operations: Practical Use Cases

Our digital twin technology is successfully proven at scale across complex industries and challenging geographical areas.

4.1 Remote asset management in critical infrastructure

- **The challenge:** Managing cellular towers or utility sites in remote, outlying locations often relies on manual logs and inaccurate reporting, leading to service delivery failures and "no-fuel" days.
- **The solution:** We create a digital twin of the remote site within our platform. This provides a "single pane of glass" view where operators can remotely monitor battery levels, fuel consumption and site security. The result is a shift from manual guesswork to meticulous, real-time control, ensuring sites remain fully functional against stringent service level agreements (SLAs).

4.2 Predictive maintenance in large-scale mining

- **The challenge:** In underground or surface mining, equipment failure can ground entire regions. Traditional systems are often siloed, making it difficult to track the health of disparate assets like conveyor weightometers and vehicle fleets.
- **The solution:** We integrate all subsystems into a unified ontological model. By applying calculations to historical signals and alarms, we can predict equipment failures or resource depletion – such as reservoir levels – hours before they reach a critical state, preventing emergency shutdowns and service interruptions.

4.3 Smart workforce and workspace management

- **The challenge:** Large industrial operations require multitudes of people, often leading to reduced accountability and increased overheads in complex environments.
- **The solution:** By creating a digital twin of the workspace, we increase accountability and visibility. When an alarm is triggered, the system identifies the nearest, most qualified field service agent and dispatches them automatically with all relevant technical context. This orchestrates a connected workforce that is more responsive and efficient.

5. Orchestrate Your Future with Digital Twins

Don't just observe your operation – orchestrate it. Contact our digital transformation specialists today to discuss how we can build a semantic digital twin tailored to your organisation’s requirements.

Email Karina Geyser, Business Unit Manager: Infrastructure Solutions and Operational Technology at Datacentrix on kgeyser@datacentrix.co.za.

6. National Contact Details

Corporate office
Tel: +27 87 741 5000

Corporate Park North
238 Roan Crescent, 1685
Old Pretoria Road, Midrand

PO Box 50722
Randjiesfontein
Midrand, 1683

Logistics centre
Tel: +27 12 657 5000

26 Landmarks Avenue
Kosmosdal, Extension 11
Samrand, Midrand

PO Box 50722
Randjiesfontein
Midrand, 1683

Coastal

Cape Town office
Tel: +27 21 529 0700

18 Oxbow Crescent
The Estuaries
Century City, 7441

PO Box 181
Century City
Cape Town, 7446

East London office
Tel: +27 43 705 8000

Suite 2, 11 Cavendish Road
Vincent
East London, 5217

PO Box 19066
Tecoma
East London, 5214

Gqeberha office
Tel: +27 41 391 0200

Southern Life Gardens
Ground Floor, Block B, 70 2nd Avenue
Newton Park, Gqeberha

PO Box 63657
Greenacres, 6057

Durban office
Tel: +27 31 389 0500

1st Floor, 30A The Boulevard
Dawncliffe, Westville
Durban, 3629

PO Box 1645
Westville, Durban, 3630

Middle East

Doha office
Tel: +974 4007 1793

Eighteen Tower
Zone 69, Street 303, Building 230
19th Floor, Office 1972
Lusail, Doha, Qatar
PO Box 23107

Rest of Africa

Datacentrix deploys technologies and provides support services to customers across 45 countries in the rest of Africa.
