

Why HPE everything as a service is a game changer for your business

IDC reports that by 2021,

75%

of enterprises will recognize the benefits of as-a-service consumption.¹

>> Key market forces driving the change

Digital transformation

New innovative disruptors are challenging businesses globally. This mandates the transformation of legacy IT infrastructure systems and processes into modern, agile IT with cloud-like flexibility and instant scaling.

Modernized experiences

As consumers become conditioned to rich user experiences on mobile devices and optimized websites, IT services must follow suit. Users demand simplified and quick methods to procure and consume IT services from internal teams.

Exponential data growth

The explosion of data volumes and increased governance over data has created an entirely new focus on digital trust—comprising privacy, security, and data protection.

Rapid application development

The requirement for IT to do more and faster has transformed the way software applications are delivered—moving away from monolithic applications to more composable ones. Application development has changed as well from the previous waterfall model to the new agile DevOps models.

>> Building your business case for consumption-based IT

Nail your capacity planning with a pay-as-you-go model Pay for what you use and plan capacity ahead of use to

avoid overprovisioning and save on TCO.

Simplify your IT budget Gain financial predictability and a clear insight into your

costs, which improves decision-making on budgets, helping you easily meet your cash flow and capital allocation strategies.

Enhance your IT operations With metering and capacity management, the resources

required for each workload are ready to deploy in minutes, not months, reducing deployment times on global projects.

Gain better experience Outstanding customer experience is at the heart of

consumption-based IT. The ability to pay for what you use, get clear insights into capacity requirements, and expand or cut back without jeopardizing the infrastructure drives high complexity infrastructure to operate like SaaS.

>> What's the HPE vision to deliver HPE GreenLake cloud services?

Get started

where you need it

Gain the agility and financial

The cloud experience

flexibility your business needs to move faster. With roughly 70% of apps and data still residing on-premises, the HPE GreenLake edge-to-cloud platform delivers the cloud experience across your edges, colocations, and data centers.

granularity into usage and costs

quickly

Accelerate your business

outcomes with the widest portfolio of on-premises cloud services, fast delivery, and over 12 years of consumption-based experience.

one experience

Innovate faster and deliver

Your ecosystem,

on your business needs with customer-ready solutions built on the HPE GreenLake platform and a robust ecosystem of partners, resellers, and service providers. The cloud experience is that simple.

>> Why HPE is ahead of the pack? • Real consumption models—based on metered usage with complete visibility and

including the hardware, software, and services you prefer
